New Mover Studies: Howard County

Sandra Charvat Burke and Mark A. Edelman

Findings
This report highlights the findings and experiences of Howard County respondents who were included in a survey of nonmetropolitan movers in Iowa. The purpose of the study is to better understand the decisions and thoughts of people who have moved and what they think about the communities and areas where they have lived. With increased understanding about why people move, community leaders may be able to develop actionable strategies for attracting and retaining population.

Twenty-one respondents from Howard County participated in the survey, eight who moved into the county, 11 who moved out, and two who moved within the county but changed zipcode (Table 1). In many respects, the Howard County participants shared similar characteristics and responses with the overall set of respondents, but in some aspects there were differences.

The Howard respondents in the study tended to be younger than the overall set of movers. For all of the mover groups for Howard County, with the exception of those who went to other states, the median age was five to twenty years younger than for the groups overall. Relatively few of the Howard movers were age 70 or older (Tables 1, 5). Somewhat higher proportions of the Howard respondents had never been married than for the overall findings. More than two-thirds of those who moved into Howard County said they had never been married (Tables 1, 5; Figure 1). In terms of college education, the Howard movers had a profile similar to the overall movers, but among those moving to Howard County, higher proportions reported having only high school or less education than among those overall (Tables 1, 5).

Reasons for moving varied among the respondents, but generally fell into those related to work, family, community, or housing. The respondents who moved to Howard County were especially likely to cite work-related reasons as the most important reason for their move. More than half said work was the most important factor (Table 1). In a similar fashion, 50 percent of the respondents who came to Howard County said they had taken a new job with a new employer, more than double the proportion among the total set of movers (Tables 2, 6; Figure 1).

</table>
The Howard movers were more likely than those from many other counties to say that wanting to be nearer parents was a factor in their moving decision. Half of those coming to Howard County cited parents as a factor in their move (Tables 2, 6; Figure 1). The Howard movers were very similar to those in other counties in that the respondents who came into Howard County were more likely than those who left to say that wanting a less congested or safer place to live or a simpler pace of life was a factor in their moving decision. The Howard movers differed from those in other counties, however, in that it was those moving in, rather than those moving out, who were most likely to say they wanted a more exciting lifestyle (Tables 2, 6; Figure 1).

Nearly two-thirds of the respondents coming to Howard County cited wanting to lower housing costs as a factor in their moving decision and a fourth of the movers to Howard noted wanting lower taxes. None of those who left Howard County cited housing or taxes as a factor in their move (Table 2).

None of the Howard respondents, regardless of which way they moved, reported a high income of $100,000 or more. Nearly two-thirds of those coming to Howard County said their household income was below $35,000, a proportion substantially higher than the total set of movers. The respondents leaving Howard County, on the other hand, were much less likely than the overall movers to report income that low (Tables 3, 7; Figure 1). Even though many of the movers into Howard County were in the lower income levels, half said their income would be somewhat to significantly higher in their new location than where they had lived previously (Table 4; Figure 1).

The Howard movers, both those who came and those who left, tended to report satisfaction with their new location. Eighty-seven percent of those coming to Howard County along with 72 percent of those who left said they were somewhat or very satisfied with their new location, proportions similar to the overall movers (Tables 4, 8). The Howard movers, however, were somewhat less likely than those overall to say they would definitely do their move over again. Just over one-third of the movers to or from Howard County said they would definitely do the move again compared to nearly half of the total respondents who said that (Tables 4, 8).

The goal of this study is to better understand the experiences of people who have moved. This report focuses on the findings for Howard County and highlights some of the similarities and differences with the findings for the entire set of 19 counties. Because the number of respondents in any one county is small, the overall findings and trends are likely the best guidelines as community residents and leaders think about possible next steps. The overall objective is to help community leaders better understand household moving trends so they can develop actionable strategies to address the reasons why people come, why people leave, enhance the qualities that cause people to stay, and thus stabilize or increase their populations.2

The Study
These research results are from a survey of nonmetropolitan movers in 19 selected counties in Iowa that included Howard County.1 People who had moved either into or out of these 19 counties were identified through a purchased database and were mailed a survey in the fall of 2005. The survey asked questions about the respondent’s previous location as well as their current location, reasons for moving, satisfaction with multiple factors in their communities, as well as their demographic, social, and economic situation. Five categories of movers are used to examine the results (Table 9). Most respondents had moved during 2003 through 2005 and 737 respondents who met the study criteria replied for an overall response rate of 35 percent. The estimated response rate for Howard County was 28.4 percent.

Notes
1. Previous reports, a description of the study, the counties included, and the survey questionnaire are available on the Community Vitality Center web site at: www.cvcia.org.
2. Previous reports contain examples of possible next steps and strategies that community leaders might consider.
