

# New Mover Studies: Davis County

Sandra Charvat Burke and Mark A. Edelman

## Findings

This report highlights the findings and experiences of Davis County respondents who were included in a survey of nonmetropolitan movers in Iowa.<sup>1</sup> The purpose of the study is to better understand the decisions and thoughts of people who have moved and what they think about the communities and areas where they have lived. With increased understanding about why people move, community leaders may be able to develop actionable strategies for attracting and retaining population.<sup>2</sup>

Twenty respondents from Davis County participated in the survey, twelve who moved into the county and eight who moved out (Table 1). In many respects, the Davis County participants shared similar characteristics and responses

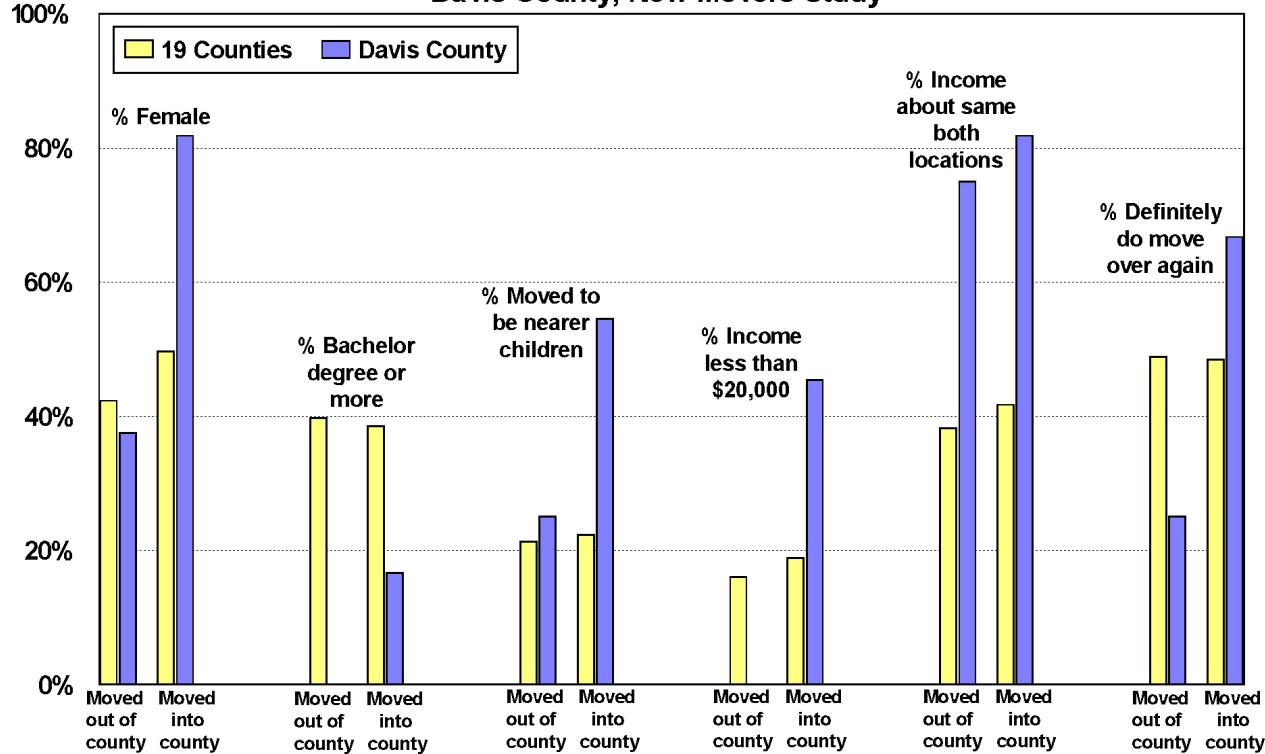

with the overall set of respondents, but in some aspects there were differences.

The Davis County movers in the study tended to be older than the participants from other counties. The respondents who moved into Davis County from other states had the highest median age (70.0 years) of any mover category (Table 1). Sixty percent of this group were age 70 or older. More of the Davis County movers were female than were the respondents for all the counties combined; nearly 82 percent of those who moved into the county were women (Tables 1, 5; Figure 1). Almost all of the movers from Davis were married but very few had college bachelor degrees. Fewer of the movers for Davis County, across any of the mover types, had bachelor degrees than did the movers overall.

Reasons for moving varied among the respondents, but generally fell into those related to work, family, community, or housing. When compared with the overall findings, Davis respondents were less likely to say that work was the most important reason for moving and more likely to note family as most important. Sixty percent of those coming from other states said that family was most important (Tables 1, 5).

The Davis County respondents were less likely than residents from other counties to say they took a new job with a new employer, but 28 percent who left the county said they moved to look for work (Tables 2, 5). Moving to be nearer children was an important factor in the moving decision of Davis movers. Fifty-four percent of those who moved into the county

Community Vitality Center, Iowa State University, Ames, IA

## New Mover Studies: Davis County

and all of the movers who came from other states said they moved to be nearer their children (Tables 2, 6; Figure 1).

The Davis County movers were very similar to those in other counties in that the respondents who came into the county were more likely than those who left to say that wanting a less congested or safer place to live or a simpler pace of life was a factor in their moving decision. Those moving out were more likely to say they wanted more arts, entertainment, or cultural activities or a more exciting lifestyle than those who came into Davis County (Tables 2, 6).

In comparison to the overall findings, relatively few of the Davis movers used the internet as a source of information for their move, but many relied on family members. Nearly all of the respondents who moved between Davis County and another state said they had used family as a source of information and many also noted friends and current community members (Table 3). Housing was reported as somewhat or very easy to find by those who came to Davis from other states, however, the movers who came from other counties in Iowa reported more difficulties in finding housing (Table 3).

The income reported by movers into Davis County tended to be lower than that for the overall study. Nearly half of those coming into the county and all of the movers from another state reported household incomes less than \$20,000 (Tables 3, 7; Figure 1). In a pattern similar to the overall findings, those moving out of Davis County tended to report higher income than those moving

Table 9. Mover Categories and Type and Direction of Move.

Category	Type and Direction of Move
A: Within County, Zipcode change	Moved within one of the 19 study counties but changed zip code.
B: Out To Another Iowa County	Moved out of one of the study counties to another county in Iowa.
C: In From Another Iowa County	Moved from another county in Iowa into one of the study counties.
D: Out To Another State	Moved out of one of the study counties to another state.
E: In From Another State	Moved from another state into one of the study counties.

in (Table 3). In contrast to the overall findings, most of the Davis movers, whether moving out or moving in, said that their incomes would be about the same in their new location as it was in the previous location (Tables 4, 8; Figure 1).

The movers who came into Davis County tended to be relatively satisfied with their new location. More than 90 percent said they were somewhat to very satisfied, which was higher than the overall findings (Tables 4, 8). As a reflection of that satisfaction, two-thirds of those who came to Davis County said that they would definitely do their move to the county over again (Table 4, Figure 1).

The goal of this study is to better understand the experiences of people who have moved. This report focuses on the findings for Davis County and highlights some of the similarities and differences with the findings for the entire set of 19 counties. Because the number of respondents in any one county is small, the overall findings and trends are likely the best guidelines as community residents and leaders think about possible next steps. The overall objective is to help community leaders better understand household moving trends so they can develop actionable strategies to address the reasons why people come, why people leave, enhance the qualities that cause people to

stay, and thus stabilize or increase their populations.<sup>2</sup>

### The Study

These research results are from a survey of nonmetropolitan movers in 19 selected counties in Iowa that included Davis County.<sup>1</sup> People who had moved either into or out of these 19 counties were identified through a purchased database and were mailed a survey in the fall of 2005. The survey asked questions about the respondent's previous location as well as their current location, reasons for moving, satisfaction with multiple factors in their communities, as well as their demographic, social, and economic situation. Five categories of movers are used to examine the results (Table 9). Most respondents had moved during 2003 through 2005 and 737 respondents who met the study criteria replied for an overall response rate of 35 percent. The estimated response rate for Davis County was 32.8 percent.

### Notes

1. Previous reports, a description of the study, the counties included, and the survey questionnaire are available on the Community Vitality Center web site at: [www.cvcia.org](http://www.cvcia.org).

2. Previous reports contain examples of possible next steps and strategies that community leaders might consider.
