

New Mover Studies: Sioux County

Sandra Charvat Burke and Mark A. Edelman

Findings

This report highlights the findings and experiences of Sioux County respondents who were included in a survey of nonmetropolitan movers in Iowa.¹ The purpose of the study is to better understand the decisions and thoughts of people who have moved and what they think about the communities and areas where they have lived. With increased understanding about why people move, community leaders may be able to develop actionable strategies for attracting and retaining population.²

Eighty-four respondents from Sioux County participated in the survey, 37 who moved into the county, 38 who moved out, and nine who moved within the county but changed zipcode (Table 1). In many respects, the

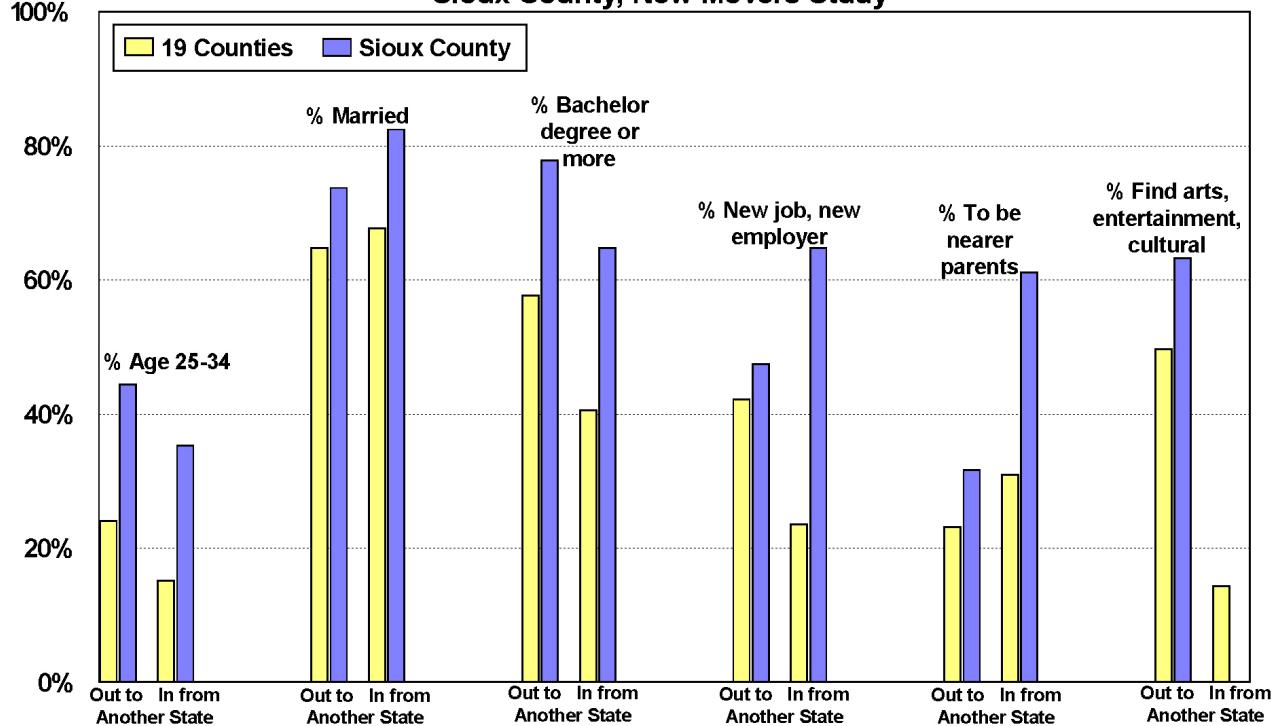

Sioux County participants shared similar characteristics and responses with the overall set of respondents, but in some aspects there were differences.

The Sioux respondents in the study tended to be younger than the overall set of movers. For all of the mover groups for Sioux County, with the exception of those who went to other Iowa counties, the median age was eight to seventeen years younger than for the groups overall. For most groups, the proportion of movers for Sioux County age 25 - 34 was much higher and the proportion age 70 or older much lower than for the groups overall (Tables 1, 5; Figure 1). Somewhat higher percentages of the Sioux respondents were married and lower proportions were divorced than in the overall findings. More than half of the

Sioux County movers reported having a college bachelor degree, an unusually high proportion. As a result, many more of the movers for Sioux County, across any of the mover categories, had a college bachelor degree than did the movers overall (Tables 1, 5; Figure 1).

Reasons for moving varied among the respondents, but generally fell into those related to work, family, community, or housing. Work-related reasons were cited as most important for all the Sioux mover groups except those who moved within the county. In a similar fashion, many of the Sioux respondents said that taking a new job with a new employer was a factor in their moving decision. Nearly two-thirds of those who came to Sioux County from other states cited a new job (Table 2, Figure 1).

New Mover Studies: Sioux County

Family factors were part of the reason for moving for many Sioux movers. Across most of the mover categories, more respondents from Sioux County said they moved to be closer to their parents or to be closer to siblings or other relatives than did the movers overall. Sixty-one percent of those who came to Sioux from other states said they moved to be closer to parents or siblings or other relatives (Tables 2, 6; Figure 1).

The Sioux respondents were similar to those in other counties in that the respondents who came into Sioux County were more likely than those who left to say that wanting a less congested or a safer place to live was a factor in their moving decision. Those moving out to other states were much more likely than those who moved in from other states to say they wanted more arts, entertainment, or cultural activities or a more exciting lifestyle. Sixty-three percent of the respondents leaving Sioux County to go to other states said that wanting more arts or entertainment was a factor in their decision (Tables 2, 6; Figure 1).

The movers coming into Sioux were more likely than those leaving to cite wanting better quality local schools as a factor in their move. Those leaving Sioux for other states were the most likely (57.9%), across all the groups and counties, to say they wanted more ethnic diversity (Tables 2, 6).

Sixty-one percent of the movers coming to Sioux from other states had previously lived in Iowa, a somewhat higher proportion than for the overall set of respondents. Among the group coming to Sioux from other states, half reported

Table 9. Mover Categories and Type and Direction of Move.

Category	Type and Direction of Move
A: Within County, Zipcode change	Moved within one of the 19 study counties but changed zip code.
B: Out To Another Iowa County	Moved out of one of the study counties to another county in Iowa.
C: In From Another Iowa County	Moved from another county in Iowa into one of the study counties.
D: Out To Another State	Moved out of one of the study counties to another state.
E: In From Another State	Moved from another state into one of the study counties.

that finding housing was somewhat to very difficult, but these same respondents were more likely than the overall to report that their income would be higher in Sioux County than in the location where they had lived previously (Tables 3-4, 7-8).

A large majority of the movers coming into Sioux, whether from other counties in Iowa or other states, said they were somewhat to very satisfied with their new location, however, among those coming from other states, fewer than one-fourth said they would definitely do their move over again (Table 4).

The goal of this study is to better understand the experiences of people who have moved. This report focuses on the findings for Sioux County and highlights some of the similarities and differences with the findings for the entire set of 19 counties. Because the number of respondents in any one county is small, the overall findings and trends are likely the best guidelines as community residents and leaders think about possible next steps. The overall objective is to help community leaders better understand household moving trends so they can develop actionable strategies to address the reasons why people come, why people leave, enhance the qualities that cause people to stay, and thus stabilize or increase their populations.²

The Study

These research results are from a survey of nonmetropolitan movers in 19 selected counties in Iowa that included Sioux County.¹ People who had moved either into or out of these 19 counties were identified through a purchased database and were mailed a survey in the fall of 2005. The survey asked questions about the respondent's previous location as well as their current location, reasons for moving, satisfaction with multiple factors in their communities, as well as their demographic, social, and economic situation. Five categories of movers are used to examine the results (Table 9). Most respondents had moved during 2003 through 2005 and 737 respondents who met the study criteria replied for an overall response rate of 35 percent. The estimated response rate for Sioux County was 41.6 percent.

Notes

1. Previous reports, a description of the study, the counties included, and the survey questionnaire are available on the Community Vitality Center web site at: www.cvcia.org.
2. Previous reports contain examples of possible next steps and strategies that community leaders might consider.
